Agriculture is the art and science of cultivating the soil, growing crops, and raising livestock. It includes the preparation of plant and animal products for people to use and their distribution to markets.

Agriculture is basic for everything, because if there is any problem in agriculture it leads to many problems like insufficient of raw materials, food production and etc.

India is the second-most populous country in the world. And to feed such a huge population, there is always a constant need for a supply of food. Therefore, there is a need for agriculture and a need for less dependency on the agriculture sector for the Economy.

Agriculture supports livelihoods through food, habitat, and jobs; providing raw materials for food and other products; and building strong economies through trade.

The data provided is more beneficial to analysis about the agricultural growth, and etc.

For the past years India's agriculture was improving day by day and there were many data about the improvement.

Crop production is most important to India and to the world also, because if there is no crop production then we need to face more problems.

India's arable land area of 159.7 million hectares (394.6 million acres) is the second largest in the world, after the United States. Its gross irrigated crop area of 82.6 million hectares (215.6 million acres) is the largest in the world.

Agriculture digitalization is still at an early stage of development in the world, but farmers will have significant benefits from using new technologies. The goal is to improve their working conditions and productivity while avoiding production loses due to bad climate conditions.

Erosion of soil by heavy rain, floods, insufficient vegetation cover etc., reduces farm productivity. Inadequate irrigation facilities and poor management of water resources have led to a great decline in agricultural productivity.

Anxiety and depression occur frequently among people engaged in agricultural occupations (e.g., farming, fishing, hunting, ranching, lumber harvest, farm laborer) because of their genetic inclinations and because their occupations are highly stressful and dangerous.
